v. 13, no. 6, p. 270-274.

X-ray diagrams and the results of counts of samples  
of lime and cement are discussed. Elements down to  
atomic number 11 can be determined. Elements with  
atomic number 11 to 20 have to be determined in the  
vacuum spectrograph, because too much absorption of  
the radiation occurs in air. (Author)
